

Onet continues its development in airport services and wins baggage handling for Air France-KLM at Paris Orly airport

Marseilles, 25 April 2017 – on 1st April 2017, Onet Airport Services began a seven-year contract with Air France-KLM for baggage handling and deployment of air bridges at Orly airport. This new contract demonstrates Onet services and engineering's growth dynamic in this area.

Onet and Air France-KLM: a contract signed for seven years

The new market won at Orly airport has enabled Onet to reach a new milestone in the development of its airport services business. Onet will be acting for the Air France-KLM account managing baggage handling and the deployment of air bridges. Other tasks, such as preparing the arrival circuit for passengers as well as applying runway incursion prevention measures (i.e. boarding passengers at the foot of the plane) are also part of the contract between the two companies.

"This new contract strengthens our position as a major player in airport services and an expert in baggage handling on the largest French platforms. Our strategy is to satisfy the customers at the centre of our actions, in baggage logistics and full handling," indicated Thierry Brunel, Onet National Business Director.

Onet Airport Services: an ambitious development strategy

With an existing presence in France's major airports (Paris, Strasbourg, Lyon, Marseilles, Biarritz, Saint-Etienne, Clermont-Ferrand and Saint-Nazaire), this new contract confirms a significant step for Onet in the path taken over the last few months towards developing its airport services business. In 2016, the company signed a contract with Volotea for full handling operations for the airport in Strasbourg, and they already signed a contract with Air France-KLM for handling sorting for terminal E at Roissy-Charles de Gaulle airport—a strategic site which several tens of thousands of suitcases go through every day.

For their clients, the renewal in 2016 for a two-year period and for all of their activities, of the ISAGO certification (IATA Safety Audit for Ground Operations) is additional proof of the quality and safety of the operations carried out by Onet.
